

How to Setup Google Colab

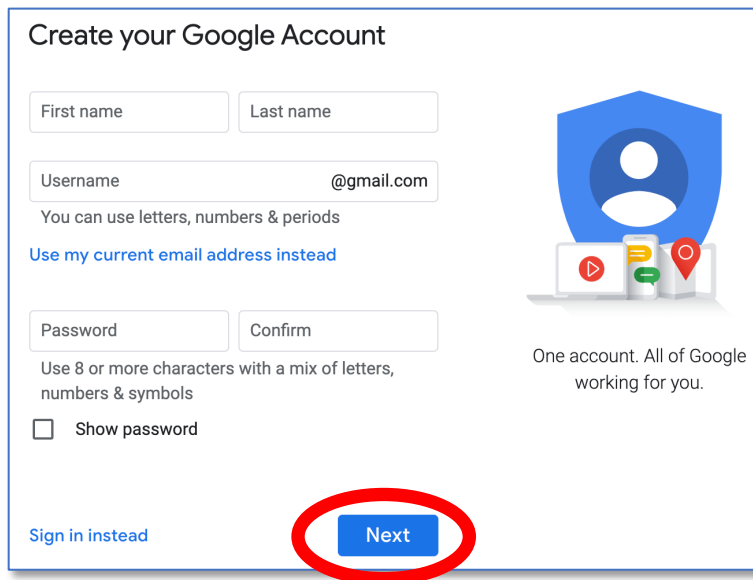

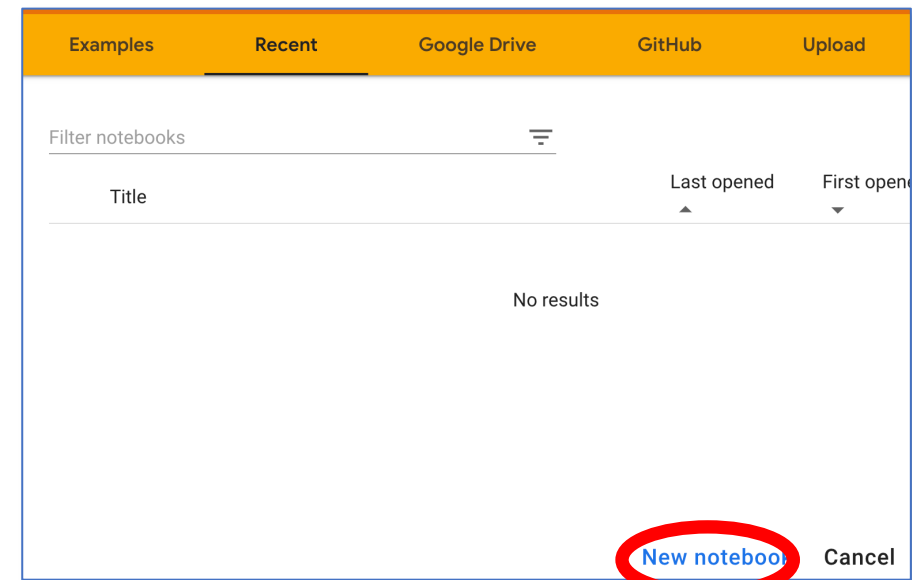

What is Colab?

Google Colab (or "Colaboratory") allows you to develop Python code in your browser with zero configuration!

Step1: Create Google account (accounts.google.com/signup) and sign in.

Step2: Open URL (colab.research.google.com) from your Google account.

A screenshot of the "Create your Google Account" page. It features input fields for "First name", "Last name", "Username", and "Password", along with a "Confirm" field. A "Next" button is circled in red at the bottom right. To the right, there is a blue shield icon and a laptop with various app icons. Text below the laptop reads "One account. All of Google working for you." There is also a "Sign in instead" link at the bottom left.
